

CUSTOMIZED SOLUTIONS

Together with our customers we already developed solutions for

- Washing technology
- High pressure applications
- High temperature applications
- CNG fueling stations
- Shipbuilding

Since the company has been founded in 1971, we developed more than 3000 different types of valves and over 900 additional valve options.

This experience is the foundation for the upcoming innovations in the future.

Our qualified Team will support you in choosing the type of valve that fits your application.

High pressure valve with manual override

High pressure valve with position indicator

High pressure valve with two position indicators and manual override

Extended temperature valve with two position indicators acc. to ATEX

High temperature valve, slow opening on high medium velocity

Normally open with manual override and position indicator
